

Financial Dashboard Creation

1. Project Description

An interactive Power BI financial dashboard designed to analyse financial performance, profitability, budget versus actual performance, cash flow, receivables, payables, and product/service performance.

2. Tools & Technologies

- Microsoft Power BI
- Power Query / Data Preparation
- DAX
- Interactive Dashboard Design

3. Approach / Methodology

Financial data was organised into meaningful KPIs and interactive visuals. The dashboard includes revenue and profit analysis, EBITDA and net cash metrics, budget-versus-actual analysis, product/service performance, receivables and payables ageing, cash-flow analysis, monthly financial trends, interactive filters, and drill-down functionality.

4. Key Outcomes

- Developed an interactive financial management dashboard.
- Created KPI-driven views for financial performance monitoring.
- Analysed revenue, profitability, cash flow, budget versus actuals, receivables and payables.
- Presented product/service performance through interactive visuals.
- Enabled users to explore financial trends using filters and drill-downs.

5. Project Outcome

The project demonstrates the ability to transform financial data into an interactive management dashboard and communicate actionable performance views through business-focused visualisation.
